PROFESSIONAL SUMMARY

Trainee Engineer with around 6 months of experience in Process Automation using the AutomationEdge RPA platform. Solid understanding of web automation, data processing, and core automation concepts, with hands-on involvement in the development, testing, and deployment of automation solutions for business processes such as Bulk Data Download and Recovery Letter Download. Hands-on experience in Core Java, JavaScript, SQL, HTML, and CSS, with practical exposure to data extraction, file processing, report generation, and exception handling. Strong analytical and problem-solving skills with a quick ability to learn new technologies.

EDUCATION

B.Tech in Electronics and Telecommunication -

2020 - 2024

Shri Shivaji Vidya Prasarak Sanstha's Bapusaheb Shivajirao Deore College of Engineering, Dhule

CORE SKILLS

Technologies: Java, HTML, CSS, JavaScript

Tools: AutomationEdge V8.0.2, Process Studio

Database: MS SQL, PostgreSQL

WORK EXPERIENCE

Process: Bulk Data Download Automation

Tech used : AutomationEdge v8.0.2, Process Studio, PostgreSQL

Company: AutomationEdge

Client- Bajaj

Pune, India

Designed and implemented a robotic process for Bulk Data Download, automating data extraction, file download, and report generation to improve accuracy and reduce processing time.

Key Responsibilities:

- Understood and analysed business requirements and process workflows to identify automation opportunities.
- Assisted in the design, development, and implementation of automation solutions based on project requirements.
- Participated in requirement gathering sessions and prepared technical documentation.
- Developed and executed unit test cases to ensure the quality and reliability of automation processes.
- Monitored bot executions, analysed logs, and troubleshoot issues to ensure smooth operations.
- Supported deployment activities in UAT and Production environments.

Process: Recovery Letter Download Automation

Tech used: Automation Test Engineer

Company: AutomationEdge

Client- Bajaj

Pune, India

Designed and implemented an RPA solution to automate the retrieval of recovery letters from web-based applications. The automation processes bulk records, downloads recovery letters, validates downloaded documents, manages exceptions, and generates execution reports, significantly reducing manual effort and improving operational efficiency.

Key Responsibilities:

- Analysed business requirements and translated them into automation workflows for the recovery letter download process.
- Contributed to the design and development of the automation solution, including reviewing workflow designs, test cases, and code to ensure quality and compliance with business requirements.
- Automated the extraction and download of recovery letters from web applications using web UI automation.
- Implemented data validation, document verification, and robust exception-handling mechanisms to improve process reliability.
- Monitored bot executions, analysed execution logs, and resolved production issues to ensure stable operations.
- Supported UAT and Production deployments, including validation, issue resolution, and post-deployment support.

PROJECTS

Trainee Engineer at AutomationEdge

Nov 2025 - Jan 2026

- Completed AE Foundation course with certification and AE Developer Training.
- Well-versed with installation, migration, and debugging of AutomationEdge, including AutomationEdge server setup.
- Experienced in agent deployment and debugging.
- Proficient with Windows services, database queries, Process Studio, and its plugins.
- Well-versed with preparing technical and process documentation.
